

# Expert in aquaculture recirculation

CELL Aquaculture is a Fremantle-based aquaculture company that has successfully developed, tested and proven a modular recirculating aquaculture system for growing barramundi.

The modular system is perfectly suited for people wanting to get into aquaculture or those wanting to expand their existing aquaculture business.

This low-risk, efficient system is designed, manufactured and serviced in WA by an experienced team of aquaculture professionals.

Users of the Cell Aquaculture system have access to a year-round supply of high quality barramundi fingerlings from its own hatchery.

Cell Aquaculture provides all the necessary consulting services to get an aquaculture venture up and running.

Its custom-made equipment can be designed to suit any existing aquaculture system to improve productivity and profitability.

With access to land, water and power, barramundi can be successfully grown for profit.

If already involved in aquaculture, Cell Aquaculture can help improve production from an existing system.
